

DENNIS CORPORATION INVOLVED IN WORLD TRADE CENTER REPLACEMENT PROJECT

October 23, 2009

Columbia, SC - Dennis Corporation, a civil engineering, surveying and construction management firm headquartered in Columbia, SC, is proud to announce its involvement in the World Trade Center Replacement Project. Members of their Quality Assurance and Non-Destructive Testing (QA and NDT) division are currently performing shop fabrication inspections of the steel which will be used to construct Tower 4 of the project. The inspections, which are taking place at Banker Steel's fabrication facility in Lynchburg, Virginia, are scheduled to be complete in the next six to twelve months. Once fabrication is complete, the steel will then travel to the World Trade Center site to be used during construction.

Tower 4, which will be located on the previous World Trade Center site, will top out at 975 feet tall, making it the 4th tallest skyscraper of the 5 tower project. It was designed by Maki and Associates Architects and will include 2.3 million square feet of office and retail space.

Dennis Corporation QA and NDT Manager, Mr. Julian Hamilton will be leading the inspections for Dennis Corporation. Mr. Hamilton, a National Welding Society Certified Inspector, has performed similar inspections for commercial, government and military projects throughout his career. Even as a veteran inspector, Mr. Hamilton is still humbled by his role in the World Trade Center Project. Mr. Hamilton stated, "Dennis Corporation and myself are proud to be involved in such a monumental project. It is an honor to be able to take part in the rebuilding of a landmark that is both symbolic and inspirational to the entire world."
