

## Dennis Corporation Job Shadowing Program

Continuing our commitment to mentoring students, Dennis Corporation has also participated in a high school job shadowing program in conjunction with Fairfield County. This program allows high school students to shadow industry professionals and spend a day learning about the field of engineering and surveying.

On March 1, 2007, two Fairfield County high school students spent the day at Dennis Corporation shadowing each division manager and learning about the different opportunities an

engineering, surveying and construction management career can offer. The students spent the day learning about civil infrastructure, construction management, construction services, expert witness, special projects, surveying, traffic engineering and transportation engineering.

Dennis Corporation welcomed the opportunity to share the advantages of the engineering, surveying and construction management industry with these two students, while showing them a variety of career options for students hoping to pursue technical careers. Both students appreciated the experience and look forward to pursuing careers in surveying. Taylor Wade, who found the Civil Infrastructure division to be most interesting, stated, "It was a great opportunity to find out how a good civil engineering firm operates on a daily basis. [The experience was] very informative and fun. Now I know what's ahead in my future in this career." On his experience, Andrew Drake said, "This day gave me an opportunity to see if this work environment is one in which I might be comfortable in the future."

Mr. Tim Antley mentoring the students about the Construction Services Division.
